B&T 2024

Swiss Precision For The Professional User

What began in 1991 as a designer and manufacturer of the worlds most advanced suppressors, B&T has become an industry leader in state-of-the-art, premium-grade tactical weapon systems.

2023 will see the introduction of a variety of new and exciting platforms inclusive of our hidden in plain sight BWC9

chassis, a tablet sized brief case accessory that with the flick of the wrist unfolds into a compact pistol caliber carbine. The BWC9 takes advantage of the modularity of the SIG Sauer P320's fire control unit and slide assembly, which when user installed within the chassis, creates a fully functional firearm. This non-standard platform features an ergonomic carry handle that discreetly houses an Aimpoint ACRO red dot sighting system and is capable

of accepting various illumination and laser sighting systems. While the BWC9 is the star of 2023, a keen eye will observe several other unique introductions inclusive of the folding and easily stowed KH9 Covert; a scaled down TP9 known as the TP380; a new optics ready, aluminum framed striker-fired pistol; a hard-hitting, big-bore SPC10 10mm; an integrally suppressed APC308 SD precision rifle, and a number

of new suppressors to include the MARS Gen 2, light and heavy machinegun suppressors and next generation assault rifles – the SPC223 & SPC300 – just to name a few. We are also excited to bring to you a pair of all-new Limited Series platforms based upon the popular APC9 PRO submachine gun. These Limited models will be available in short-barreled rifle (SBR) configurations and feature a newly developed MBT

folding and telescoping stock, a fully ambidextrous aluminum lower receiver with a flared magazine well and recontoured M-LOK compatible forends. The details of these feature-rich Limited Edition models are highlighted within the following pages.

Welcome to a new level of precision, adaptability, and reliability.

Welcome to B&T.

PRO SERIES

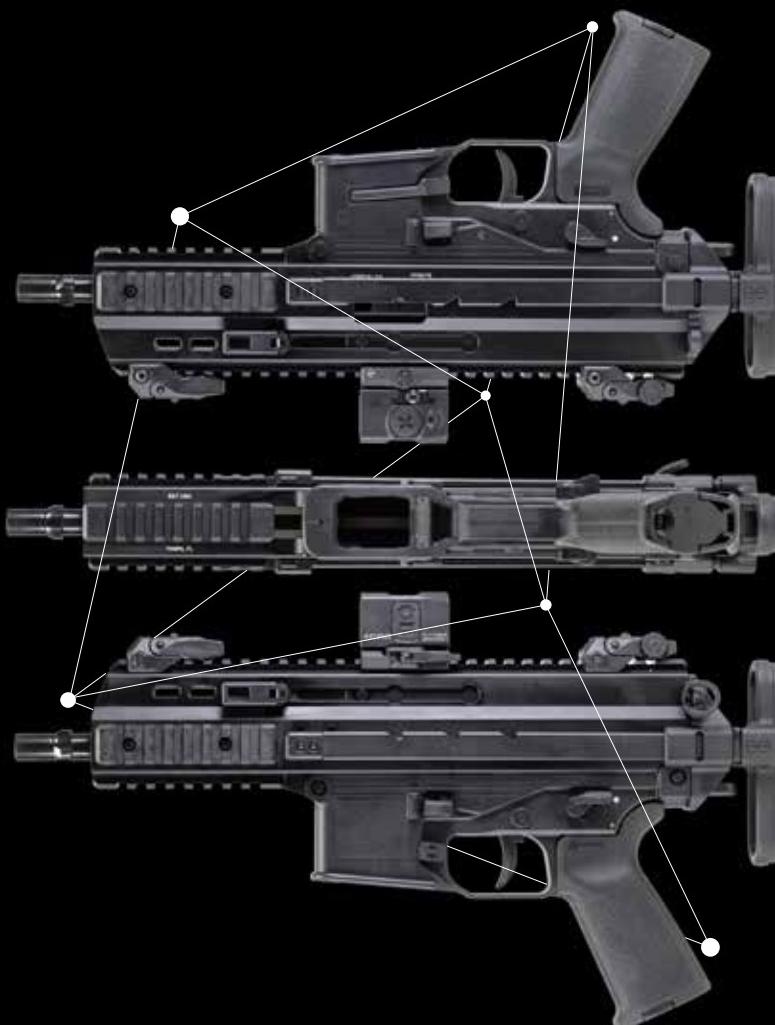

APC Series advanced police carbine

The Advanced Police Carbine (APC) series was designed for the demands of today's police, special forces, and military units around the world. As the hallmark of the B&T line, the APC series represents the ultimate in performance, reliability, and accuracy. The APC family includes the flexible and adaptable APC9/40 & 45/10mm, the rifle caliber APC223/556/300 line, and the ultimate in semiautomatic precision, the APC308. With a comprehensive suite of accessories created specifically for these platforms, the APC series represents a breakthrough in customization and modularity for every operator, and every specialized mission.

Pro Series

New to the APC Series are the PRO variants of the APC9/40/45 and 10mm. These models have received the PRO treatment, bringing a new level of performance and ergonomics to the APC platform. All PRO models feature a dual auto-folding, non-reciprocating charging handles, improved lower receiver ergonomics including a side positioned bolt hold open/release, replaceable M4 compatible pistol grip, and Magpul® M-Lok® accessory slots. Additionally, the APC9 PRO is compatible with standard B&T, Glock® and SIG® P320 magazines.

SCW Contracts

sub compact weapon

B&T USA is honored to have our APC9K PRO Sub Compact Weapon system selected by two different branches of the United States Military as well as a rapidly growing list of United States governmental agencies after identifying an operational need for a highly concealable, ultra-compact weapon system. At less than 15-inches in length, the APC9K PRO is optimized for low visibility carriage and discreet deployment; use in and around vehicles, and within confined spaces – all while delivering unsurpassed accuracy, controllability, ergonomics and modularity.

We are pleased to know that specially trained service members, agents and personnel are being equipped with the finest equipment available to not only ensure their personal safety during challenging assignments, but contribute to the overall success of their missions.

The APC9K utilizes a hydraulic buffer system to drastically reduce felt recoil and muzzle rise and is the most compact version the APC9 PRO line. The platform features functional updates to include dual auto-folding, non-reciprocating and ambidextrous charging handles, improved lower receiver ergonomics that include a side positioned bolt hold open/release, removable M4 compatible grip, and Magpul M-Lok accessory slots located on the forend. Additionally, the APC9K can be equipped to accommodate Glock 9mm magazines, SIG P320 magazines or proprietary B&T magazines, by simply switching the non-serialized lower receiver group.

APC9 SD

advanced police carbine

The only thing better than an APC9 PRO is an APC9 PRO with an integral suppressor. Designed with the best Swiss engineering has to offer, this compact weapon includes numerous user-friendly features, such as an ambidextrous selector switch and safety, an ergonomic trigger assembly, non-reciprocating, auto-folding charging handle, and B&T's highly regarded hydraulic buffer system.

The integral sound suppressor works with the ported barrel to reduce the noise signature and velocity of supersonic ammunition to subsonic levels under 130 dB. Housed in this nimble, fast-handling 9mm SBR with refined lower ergonomics, the suppressor gives a decided advantage to tactical operators addressing complex and constantly shifting environments. This model boasts a sub-compact suppressor and standard B&T 9mm lower backed by a telescoping stock. Variants with GLOCK 9mm lowers and compact or full-length suppressors are also available. Units are supplied with backup sights, cleaning kit, sling, soft case, and one 30-round magazine.

NEW FOR 2024

APC9 SD²

scalable suppressor system

The APC9K SD² was a submission to the United States Army as a demonstration of available technology for its Sub Compact Weapon (SCW) trials; one that offered unseen advancements in compactness, ergonomics, and integral, scalable suppression. Ultimately, B&T USA's APC9K was selected and awarded the U.S. Army's SCW contract as it presented exactly what the U.S. Army required for its mission.

At less than 15-inches in overall length, the APC9K SD² is the shortest integrally suppressed submachine gun currently available; optimized for low visibility carriage and discreet deployment; while delivering unsurpassed accuracy, controllability, and ergonomics. With its advanced, scalable suppressor system, the SD² is the solution for your future mission.

NEW FOR 2024

APC86

advanced police carbine

The all-new APC86 chambered in 8.6 BLK is a specialized tool for missions requiring a heavy-hitting projectile optimized for whisper-quiet precision out to 400 yards, as well as the ability to alternate between supersonic and subsonic projectiles with a magazine change. Equipped with an integrated, state-of-the-art reflex sound suppressor, the APC86 blends the ultra-low sound signature of our SPR300 PRO with semiautomatic mid-range precision and intuitive controls in a compact package. Whether configured as an assault rifle or as an ultra-quiet special-purpose rifle, this system is capable of intermediate barrier penetration at extended ranges.

BT-15 HD MOD1

advanced police carbine

The BT-15 HD MOD1 is B&T USA's introductory AR-pattern 5.56 rifle. Improving upon the Hodge Defense MOD 1 Carbine, our BT-15 utilizes Hodge's pinch-lock handguard, which provides precise fitting to the upper receiver. This minimizes any appreciable rail flex, and the design is fully compatible with the M-Lok accessory suite.

The BT-15 MOD1's tuned mid-length gas system with either a 16- or 14.5-inch barrel offers a mild recoil impulse and flawless functionality with or without a suppressor. The 11.5-inch-barreled option uses a carbine-length gas system engineered for reliability without the added complexity and failure point of an adjustable gas block. The enhanced bolt is constructed of 9310 alloy steel and is QPQ-coated for lubricity and expanded bolt life by lowering the friction coefficient between the barrel extension and bolt, while also minimizing friction on the back of the lugs during extraction.

The cold hammer-forged chrome-lined barrel, available in 11.5-, 14.5-, and 16-inch lengths, is free floating and thermally fitted to the upper receiver. These match-grade barrels utilize a constant taper profile and are optimized for use with M855A1 EPR ammunition.

BT-15 HD MOD2

advanced police carbine

B&T USA's BT-15 HD MOD 2 is our enhanced, ambidextrous, forged AR-pattern 5.56 rifle, featuring an 11.5- or 16-inch barrel. Improving upon the Hodge Defense MOD 2 Carbine, the BT-15 HD MOD 2 utilizes Hodge's S-lock handguard, precision fit to the upper receiver. This design mitigates any appreciable rail flex and is fully compatible with the M-Lok accessory suite.

The tuned mid-length gas system for the BT-15 MOD 2's 16-inch barrel offers a mild recoil impulse and flawless functionality with or without a suppressor—and without the complexity and failure point of an adjustable gas block. The enhanced bolt is constructed of 9310 alloy steel and is QPQ-coated for lubricity and expanded bolt life by lowering the friction coefficient between the barrel extension and bolt, while also minimizing friction on the back of the lugs during extraction.

The cold hammer-forged chrome-lined barrel is free-floating and thermally fitted to the upper receiver. This match-grade barrel utilizes a constant taper profile and is optimized for use with M855A1 EPR ammunition.

Special Purpose Carbine (SPC)

hybrid platform

SPC Series

A True Hybrid Subgun Platform

The SPC9 is a new 9mm carbine that incorporates many of the features found on the B&T APC9, MP5 and common AR platforms of weapons. It provides excellent handling, accuracy, safety, and a very low recoil impulse thanks to the innovative hydraulic buffer. The most innovative aspect of this product is that it can be modified by the user to accept any Glock 9mm magazine. This provides flexibility, cost saving and inter-operability between team members.

The SPC9 line of weapons is a hybrid and truly customer demanded design. It has also been called in rather endearing terms as the "Frankengun". This is because it has incorporated many different

features that are found on various weapon systems developed from around the world.

A Police agency in Europe required a 9mm carbine with the same handling features and ergonomics as the AR platform. The reason for this was twofold, one was the cost-saving of the 9mm round over that of the .300 AAC round and the 5.56 round. The second was that the bullet trap in the existing shooting range was not rated for rifle ammunition and could only withstand pistol ammunition. The solution was a 9mm training option.

SPC9®

special purpose carbine

Born from a European tender requesting a 9mm carbine with the same handling characteristics and ergonomics as the AR platform; the all-new SPC9 incorporates many of the features found on the B&T APC9, MP5 and AR platforms combined into one, very versatile platform. Lightweight and reliable, well balanced and accurate, safe and modular – the SPC9 checks all the boxes and is one of the lightest recoiling 9mm carbines available, thanks to B&T's innovative and effective hydraulic buffer system.

USW®

universal service weapon

Not a new take on a current platform, the USW is an entirely new category of its own. This unique platform bridges the gap between pistol and submachine gun. The USW is similar in size to a traditional service pistol, with the extended range and stabilization of a 9mm police carbine. Effective target engagement out to, and beyond, 100 meters is attainable by even average shooters. The USW-A1 is equipped with an Aimpoint ACRO-P1 miniature red dot sight, a spring-loaded folding stock and can be configured with a B&T Impuls-IIA suppressor. Concealment and level 2 duty holsters are available.

Conversion Kits

The USW-G Conversion Kit brings this same USW configuration to all Glock® 17 and 19 pistols with standard rails (Gen. 3 - 5). The USW-320 and USW-M17 Conversion Kits add USW functionality to SIG SAUER P320 and M17 pistols.

KH9 / KH45

limited production

The all-new KH9 Covert is a limited production model featuring a magazine well and pistol grip that each fold 90-degrees allowing the already flat KH9 to be discreetly stowed within limited in depth, narrow spaces, yet can be rapidly employed, making it an ideal E&E platform for personnel working in non-permissive environments.

When the magazine well is unfolded, it will naturally guide the magazine directly into the chamber area, where it can be quickly loaded by depressing the top mounted bolt hold open button or by using the charging handle.

The KH9 Covert model is unique in that it features a double action trigger system; the selector switch features three positions: up for safe, mid is the fire position, and when depressed downward the selector decocks the hammer mass. The platform is delivered with a new 25-rd magazine designed to allow the platform to stow as compact as possible, however, it retains ability to accept both standard B&T APC9 polymer magazines of all sizes. The KH9 Covert will be delivered with a small sling

STATION SIX®

suppressed pistols

Tracing its roots back to the covert, World War II-era Welrod pistol, and more modernized contract VP9, the all-new Station SIX-9 (Silenced Project caliber 9) harkens back to the famed Bride Hall weapons acquisition section, or SOE Station VI and later Station IX, where the original concept was conceived. This updated, integrally suppressed pistol features a new grip and updated magazines, yet maintains its non-descript appearance, whisper-quiet sound signature and unique rotating bolt operation. Available in 9mm and .45 Auto.

Hush Puppy® Glock 19

suppressed pistols

The Hush Puppy® Glock 19 is a purpose-built combination pistol/suppressor system. For those familiar with the original Welrod pistol—and B&T's own VP9 and Station Six pistols—the Hush Puppy Glock 19 is the latest iteration of a pistol destined to fulfill highly specialized mission sets.

Where the Hush Puppy® differs from bolt-action pistols is in its semiautomatic functionality, red-dot capability and LAM mounting options. With the flip of a switch, operators can lock the pistol's slide closed for the lowest sound signature possible, while also preventing the ejection of a spent case. Flip the switch upward and the pistol is a fully functional semiautomatic Glock 19.

The Hush Puppy® comes complete with an Aimpoint ACRO P-2 red-dot sight milled deep within the pistol's slide. This mounting design minimizes the gun's overall profile and allows it to co-witness with factory low-mount sights for an exceptionally streamlined package. With the suppressor attached, the pistol is slightly longer than a Glock 34, allowing it to be easily concealed AIWB, IWB, or OWB, as well as carried off body.

Hush Puppy® and Super Vel® are registered trademarks of Nevada Cartridge Co. LLC. The Glock Slide Lock Device (U.S. patent 10,378,838) is owned by Nevada Cartridge Co. LLC.

folding accessory chassis

The all-new BWC9 is a folding personal defense chassis designed to be a compact, non-descript accessory that hides in plain sight. In its folded form, it can be carried using the integrated carry handle. In this position, placing slight rearward pressure upon the charging handle, a subtle flick of the wrist completely unfolds and locks the BWC9 into its extended position. It can be refolded and stowed nearly as quickly. The BWC is being sold as an accessory; users will provide their P320 FCU and complete slide assembly of their choice (Sub-Compact through X-Five length including threaded barrels). Not compatible with suppressor height sights. Aimpoint ACRO P-2 is included.

GHM

subgun platform

This rapid-deployment family of 9mm pistols and SBRs is named after the grasshopper mouse, a small, savagely carnivorous rodent of the Southwest U.S., famous for its favorite snack—scorpions—and a natural immunity to the creepy arachnid's venom.

The GHM is a cost-effective, competition-oriented PCC featuring many of the same great qualities that made the APC9 so successful, while providing the user with additional levels of flexibility and modularity. Our Gen 2s allow users to change barrel lengths, handguards and stocks with ease, and adding an SD kit and other accessories is just as uncomplicated. Like many B&T SMGs, the GHM9 accepts all APC9 PRO lower receiver groups, offering compatibility with GLOCK, SIG P320 and proprietary B&T magazines simply by switching the non-serialized lower receiver group.

This GHM9 pistol ships with a standard B&T 9mm lower and a 5.7-in. barrel with integral sound suppression. Standard equipment includes backup sights, top-side, fore-end side and under-barrel rails, B&T's recoil-reducing hydraulic buffer system, sling, cleaning kit, soft case and one 30-round magazine.

MAINLINE SUPPRESSORS

REDUCED BACK PRESSURE

Improves Shooter Safety & Reduces Toxin Exposure

The Future of Small-Arms Suppressors

B&T's latest commitment to suppressor innovation is our Reduced Backpressure System (RBS) suppressors. RBS technology is a giant leap forward in reducing the amount of back blast to the shooter that is composed of carbon monoxide, ammonia hydrogen cyanide, as well as the content and composition of metals in the dust emitted from various small-arms weapon systems during prolonged firing schedules.

No Compromises

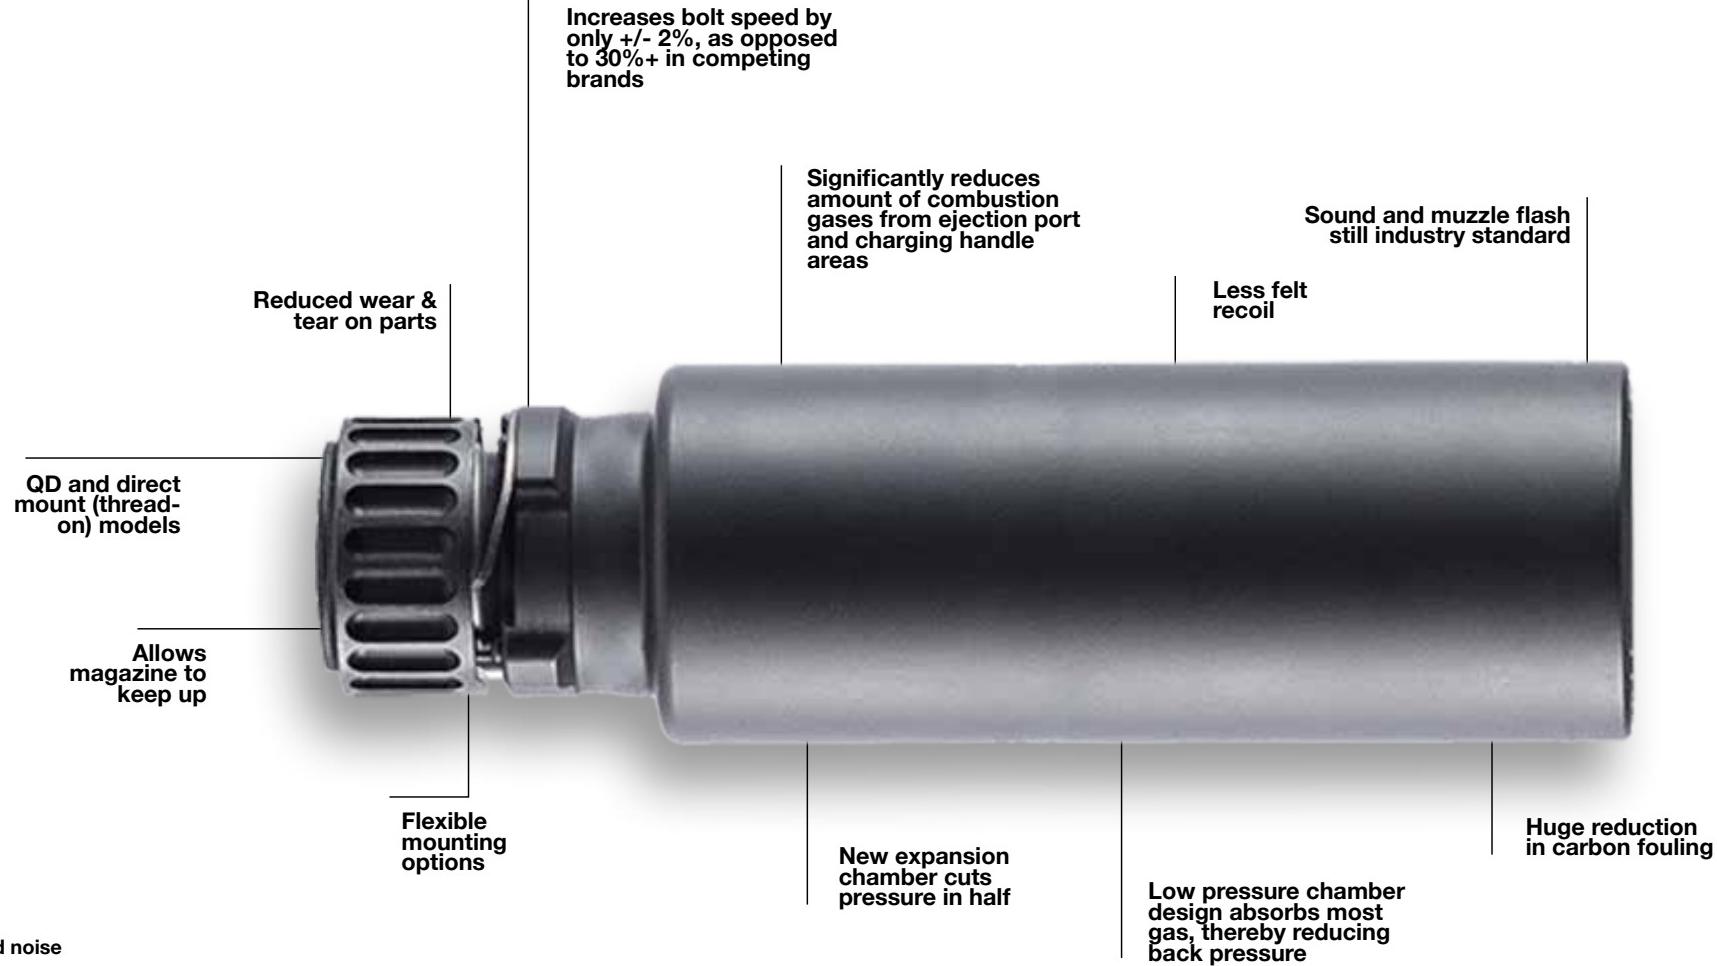

The result is that the RBS suppressor significantly reduces the combustion gases ejected from the ejection window. The low-pressure expansion chamber only minimally increases the size and weight of the suppressor compared to conventional baffled silencers, all while providing industry-leading sound and flash signature reduction, comparable to the proven B&T ROTEX-V suppressors.

Health and Safety

All RBS suppressors feature a low-pressure chamber design to absorb a substantial amount of gas, thereby reducing back pressure. This design significantly minimizes, and in some cases eliminates, excess gas pressure at the charging handle and ejection port locations – thereby significantly minimizing potential respiratory problems caused by the inhalation of exhaust gases – making the RBS a top choice for assault rifles and machine guns.

Reduced Backpressure System (RBS)

- Reduced noise
- Reduced muzzle flash
- Increase in tactical awareness
- Increase in command and control
- Remediate hearing loss
- Assist in friend or foe identification

STANDARD INTERFACES

RBS Compatibility With Existing Systems

- B&T small-arms and crew-served weapon suppressors are compatible with factory muzzle devices, standard NATO flash hiders, SureFire muzzle attachments and a host of other options.
- The Reduced Backpressure System (RBS) suppressor is the optimal solution for comprehensive signature reduction and can survive the most aggressive firing schedules and use cases.
- The RBS offers a substantial reduction in back pressure and combustion gases with minimal increase in cyclic rate, leading to extended parts life and improved shooter health and function.
- Available in multiple lengths, flexible attachment options and calibers up to and including .50 BMG.
- Custom-engineered solutions are available to meet any end-user requirements.

Impuls OLS-M

pistol suppressors

Created specifically for special units within the police and military sector, every gram of equipment counts during dynamic operations. The Impuls-OLS silencer has therefore been consistently designed for minimum weight with very good sound reduction. Based on the proven Impuls-IIA the Impuls-OLS is a very good choice not only for the mentioned user groups, but also for civilian users. It can be used on many different types of pistols, provided the same connection thread is used.

The updated OLS-M comes in one size, yet offers a modular section that can be added or removed based upon end user mission requirements, allowing the suppressor to remain in a full-length configuration, or in a compact configuration, should the user choose compactness over maximum sound suppression.

Impuls IIA

pistol suppressors

The Impuls-IIA suppressor is probably the most widely used handgun suppressor in the world. It is the suppressor of choice of some of the best-known special operations units in NATO and in many other countries. The reason for this is simple: most of European OEM pistol producers have tested and qualified this suppressor with the product that they sell. The producers know, that if they supply a suppressor with a handgun they produce and if there is a problem, the firearm manufacturer will have to take on the responsibility not the suppressor manufacturer. This is why most manufacturers will not accept any warranty claim on a handgun if the suppressors used is not a B&T Impuls-IIA.

The use of special alloys, high-tech coatings, and years of end user feedback make this suppressor not only the first choice of professional users who require a rugged, reliable and easily maintained pistol suppressor but also one of the most widely used handgun suppressors in the world. It is popular due to its reliable functioning, ease of use, long service life and high level of sound reduction.

The unique design of the Impuls-IIA spring booster ensures reliable feeding and ejecting of both subsonic and supersonic ammunition. The Impuls-IIA ships with an 1/2x28mm Impuls device, while 13.5x1LH and others are available as accessory items

SMG Suppressors

modular SMG suppressors

Modular 4 Ways

modular SMG suppressors

The all-new SQD-M offers modularity and customization not seen in another submachine gun suppressor to date. The SQD-M comes in one size yet offers a modular RBS-compatible section that can be added or removed based upon end user mission requirements, allowing the suppressor to remain in a full-length configuration, or in a compact configuration, should the user choose compactness over maximum sound suppression. Further, two endcaps are included with the SQD-M, one vented and the other non-vented. These endcaps allow the user the option of turning the RBS off in favor of a sealed system. If the ultimate in sound suppression is desired, the full-length suppressor with the non-vented endcap will provide this. Otherwise, the end-user can choose for themselves the size and function requirements to best fit their mission.

SQD[®]

super quick disconnect

The Super Quick Disconnect, or SQD attachment, for our RBS9 suppressor has many features that have yet to be seen in any previous suppressor produced by B&T. The RBS9 SQD is an ingenious fusion of the reduced backpressure system (RBS) technology for which B&T is known for, and a totally new one-hand, 3-lug mounting system. The system is both smooth and fast to use. The new SQD mounting system is perhaps the fastest 3-Lug attachment system of its type. The new RBS SQD suppressor will fit all 9mm weapons featuring a 3-Lug barrel interface. This includes but is not limited to B&T's APC9, SPC9, GHM9, as well as HK's MP5, MP5K and variants with in-spec tri-lug barrels.

The suppressor mounts onto the barrel of the submachine gun by simply pressing it over the barrel. The spring-loaded retaining collar will snap down onto the 3-Lug attachment, automatically locking the suppressor into place. The suppressor will remain securely in place, until the operator wishes to remove it. By simply depressing the tab, the suppressor is free to be removed from the barrel and stowed or reinstalled.

The all-new SQD-M offers modularity and customization not seen in another submachine gun suppressor to date. The SQD-M comes in one size yet offers a modular RBS-compatible section that can be added or removed based upon end user mission requirements, allowing the suppressor to remain in a full-length configuration, or in a compact configuration, should the user choose compactness over maximum sound suppression. Further, two endcaps are included with the SQD-M, one vented and the other non-vented. These endcaps allow the user the option of turning the RBS off in favor of a sealed system. If the ultimate in sound suppression is desired, the full-length suppressor with the non-vented endcap will provide this. Otherwise, the end-user can choose for themselves the size and function requirements to best fit their mission.

TP9 Suppressor

dedicated TP9 / MP9 suppressors

The TP9 RBS suppressor is the ideal addition to the TP9 PDW/MP9 submachine gun. Thanks to its QD-lock, it can be mounted/dismounted in a matter of seconds. An integrated NAR/Picatinny rail mount allows the addition of illuminators and/or aiming lasers. Depending on suppressor installation, this rail section can be positioned at either the 6 or 12 o'clock positions. This updated TP9 suppressor features Reduced Backpressure System (RBS) technology, significantly reducing the gas blow back to the shooter, all while maintaining the same level of flash and sound reduction of the legacy variant.

RIFLE SUPPRESSORS

mainline options

HUB Compatible modular SMG suppressors

Our new rifle suppressors are made up of our traditional baffled Rotex and our hybrid Slim Reduced Backpressure System (SRBS), both available 5.56 & 7.62. Each suppressor is constructed using laser bed fusion manufacturing techniques and are available in either 718 Inconel or 100% Titanium. Each rifle suppressor will ship with a Rotex-SF HUB compatible with all B&T Rotex flash hiders and all SureFire SOCOM flash hiders, muzzle brakes and WarComp hybrid muzzle devices. Both the Rotex and SRBS suppressor are fully 3D printed and weldless. The Rotex-SF HUB is machined out of Titanium bar stock. Direct Mount HUB assemblies are available in Inconel or Titanium.

ROTEX® 762 TI

titanium mainline suppressors

The Rotex 762 Full Size Titanium is the ideal choice when weight savings is priority number one. 40% lighter than its 718 Inconel brethren, the Rotex Ti offers substantial weight savings, yet maintains the same high-performance you've come to expect from our Rotex line of suppressors inclusive of exceptional sound suppression capabilities, extreme durability and longevity, all while providing industry leading sound and flash reduction. The Rotex Ti is barely there, providing minimal deviation in point of aim/point of impact. Given the nature of Titanium, we recommend use on platforms that see lower-volume firing schedules that are more precision-oriented such as SPR's and bolt-action rifles. The 762 FS weighs just 6.9 ounces a DM HUB and just 10.4 ounces with the included Rotex-SF QD HUB. Rotex 7.62 suppressors are magnum-rated.

Constructed using laser bed fusion manufacturing techniques, our traditionally baffled Rotex Full-Size rifle suppressor in 7.62 is constructed of 100% Titanium and is completely weldless. Each suppressor is threaded 1.375x24TPI making it fully HUB compatible, should you choose to mix and match your attachment interfaces. The Rotex ships with B&T's Rotex-SF HUB assembly, which is compatible with all B&T Rotex flash hiders, as well as all of SureFire SOCOM flash hiders, Warcomps and muzzle brakes. Cerakote	ROTEX / SureFire	6.96 in 177mm	1.73 in 43mm	16.2 oz 459g

ALTERNATE CONFIGURATIONS

Weight includes ROTEX/SF HUB unless otherwise noted. For complete specs, please visit bt-usa.com

07

FEATURES TITANIUM

- Ships with Rotex-SF Titanium HUB assembly
- Fully HUB-compatible (1.375x24TPI)
- 3D-printed of 100% Titanium
- Special Purpose Rifle Oriented
- A mission-specific suppressor where sustained high-volume firing schedules are not anticipated

FEATURES INCONEL

- Ships with Rotex-SF Titanium HUB assembly
- Fully HUB-compatible (1.375x24TPI)
- 3D-printed of 718 Inconel
- Full Auto Rated, No Barrel Length Restrictions
- An ideal choice when reduced backpressure is a requirement

SRBS 762

slimline reduced backpressure system

Our hybrid Slim Reduced Backpressure System (SRBS) 5.56 Full-Length suppressor is manufactured using laser bed fusion techniques and constructed of 718 Inconel. Also available for 7.62-chambered rifles and with the option of 100-percent titanium construction in either caliber, each suppressor ships with B&T's Rotex-SF HUB assembly, which is compatible with all B&T Rotex flash hiders, WarComp hybrid muzzle devices, and all SureFire SOCOM flash hiders and muzzle brakes. Our Rotex suppressor is fully 3D-printed and weldless for heightened structural integrity, while the Rotex-SF HUB is machined from titanium bar stock. Direct-mount HUB assemblies are available in Inconel or Titanium.

MK46 QD Suppressor

reduced back pressure series

The M46 machine-gun suppressor was originally developed by B&T at the request of the OEM producer of the Minimi. The Minimi presents a unique case for suppressor development, as the firearm is produced in both Belgium and the United States. The guns are virtually identical, but some important differences—notably the flash hider-affect suppressor use.

Our current MK46 RBS 556 MG suppressor addresses the individual requirements of the guns produced in both countries by offering expanded muzzle attachment options optimized for dismounted, light and fast infantry use. Additionally, B&T's Reduced Back Pressure System (RBS) suppressor provides a substantial reduction in back pressure and combustion gases with minimal increase in cyclic rate. This leads to extended parts life and suppressor functionality.

B&T's MK46 RBS suppressor is designed to withstand abusively aggressive firing schedules typically found on high rate-of-fire assault rifles and belt-fed machine guns. All RBS suppressors feature a low-pressure chamber design that absorbs a substantial amount of gas, thereby reducing back pressure. This design significantly minimizes, and in some cases eliminates, excess gas pressure at the charging handle and ejection port locations. These reduce the potential respiratory problems caused by the inhalation of exhaust gases, thus preserving shooter health.

The M46 RBS is manufactured using laser bed fusion techniques. Constructed entirely of 718 Inconel, this suppressor is 3-D printed and weldless, substantially reducing weight and potential failure points. Each suppressor ships with B&T's Rotex-SF mounting assembly, which is compatible with all B&T Rotex flash hiders, as well as all of SureFire's SOCOM-series flash hiders, Warcomp compensators and muzzle brakes. Platform-specific or custom mounting options are available upon request.

FEATURES

- Ships with Rotex-SF stainless-steel Interface
- 3D-printed of 718 Inconel with Cerakote finish
- Full-auto rated, no barrel-length restrictions
- An ideal choice when reduced backpressure is required

MK48 QD Suppressor

reduced back pressure series

B&T's new MK48 machine-gun suppressor represents a minimal increase in size and weight compared to conventional suppressors, while maintaining muzzle flash and noise reductions to levels similar to B&T's other proven suppressor systems.

While traditional suppressors increase bolt speed by up to and beyond 30% due to the increase in backpressure, independent measurements have shown that B&T's RBS suppressors incur a negligible increase of about 1-3%. All RBS suppressors feature a low-pressure chamber design that absorbs a substantial amount of combustion gases, thereby reducing back pressure. This design significantly minimizes, and in some cases eliminates, excess gas pressure at the charging handle and ejection port locations. This reduction in gas pressure extends parts life, reduces weapon fouling and minimizes the potential respiratory problems caused by the inhalation of exhaust gases, thus preserving shooter health.

Like all our machine-gun suppressors, B&T's MK48 762 RBS is designed to withstand the abusively aggressive firing schedules typically found on belt-fed machine guns. Manufactured using laser bed fusion techniques, the MK48 762 RBS is 3-D printed of 718 Inconel. A completely weldless design substantially reduces suppressor weight and potential failure points.

Each suppressor ships with B&T's Rotex-SF mounting assembly, which is compatible with all B&T Rotex flash hiders, as well as all of SureFire's SOCOM-series flash hiders, Warcomp compensators and muzzle brakes. Platform-specific or custom mounting options are available upon request.

240L / 240B Suppressors

reduced back pressure series

The RBS DM FN MAG suppressor utilizes the same Reduced Backpressure System (RBS) suppressor technology found in the other suppressors within this folder, but utilizes an attachment method developed specifically to provide secure mounting to the popular M240-series machine gun produced by FN. This direct-mount design threads onto the existing muzzle threads, then is further secured by a push-button ratchet mount that fastens to the existing front sight assembly and interfaces directly with the suppressor body. This creates a highly effective, yet simple and secure method of attachment.

This compact suppressor system is 6.7 inches in overall length and adds just 2.8 inches beyond the length of the original flash hider delivered with the weapon system, equating to a minimal increase in overall length and a negligible effect on the maneuverability and handling characteristics of the platform.

B&T's 240L/240B suppressor is designed to withstand the abusively aggressive firing schedules typically found with high rate-of-fire assault rifles and belt-fed machine guns. Like all our RBS suppressors, it features a low-pressure chamber that absorbs a substantial amount of combustion gases, thereby reducing back pressure. This design significantly minimizes, and in some cases eliminates, excess gas pressure at the charging handle and ejection port locations. This reduction in gas pressure extends parts life, reduces weapon fouling and minimizes the potential respiratory problems caused by the inhalation of exhaust gases, thus preserving shooter health.

Made entirely of 718 Inconel, the 240L/240B is manufactured using laser bed fusion techniques. Our 3D-printing technology results in a completely weldless design that substantially reduces suppressor weight while also minimizing potential failure points. A unique direct mount/ratchet mounting system requires no modification to the host platform yet offers repeatability and rock-solid attachment.

FEATURES

- 3D-printed of 718 Inconel with Cerakote finish
- Designed specifically for secure mounting to FN 240 series machine guns
- An ideal choice when reduced backpressure is required

.50 BMG Suppressor

reduced back pressure series

Designed specifically for use with the M2A1 .50-caliber machine gun without modification to the host weapon, the B&T M2A1 suppressor utilizes our Reduced Backpressure System (RBS) technology to substantially decrease back blast to the shooter. Our RBS technology features a low-pressure chamber that absorbs a substantial amount of combustion gases, thereby significantly minimizing, and in some cases eliminating, excess gas pressure at the charging handle and ejection port locations. This allows exhaust gases to escape at the muzzle end of the suppressor more efficiently, leading to improved shooter health and performance, while providing industry-leading flash suppression and decibel reduction-all without compromising the weapon's accuracy, reliability or rate of fire.

B&T's .50 BMG RBS suppressor is designed to withstand the abusively aggressive firing schedules typically found with high rate-of-fire assault rifles and belt-fed machine guns. Manufactured using laser bed fusion techniques, this suppressor is 3D-printed to reduce its weight and is completely weldless, which minimizes potential failure points.

FEATURES

- 3D-printed of 718 Inconel with Cerakote finish
- Direct Thread Mounting; Custom Solutions Available
- Compact design preserves firearm maneuverability and handling
- No Cyclic Rate Reduction
- An ideal choice when reduced backpressure is required
